Options:

- Country/Region (Keep as default, i.e., India)
- Day dropdown
- Month dropdown
- Year input field

Actions to be Performed:

Step 4.1: Select Date

1. Click on "Day" dropdown selector
2. Select desired date from dropdown list (e.g., 24)
 - Case sensitive element: Day dropdown

Step 4.2: Select Month

1. Click on "Month" dropdown selector
2. Select desired month from dropdown list (e.g., February)
 - Case sensitive element: Month dropdown

Step 4.3: Enter Year

1. Click on "Year" input field
2. Type the desired year (e.g., 1996)
 - Case sensitive element: Year input field

Step 4.4: Proceed

1. Click on "Next" button
 - Case sensitive text: "Next"

[Screenshot – space]

Screen No: 5

Screen Name: Name Entry Screen

Options:

- First Name input field
- Last Name input field

Actions to be Performed:

1. Click on "First name" input field
2. Enter first name (e.g., Gastón)
 - Case sensitive field label: "First name"
3. Click on "Last name" input field
4. Enter last name (e.g., Galindo)
 - Case sensitive field label: "Last name"
5. Click on "Next" button
 - Case sensitive text: "Next"

[Screenshot – space]

Screen No: 6

Screen Name: CAPTCHA Challenge Screen

Options:

- PRESS AND HOLD button

Actions to be Performed:

1. Locate the "PRESS AND HOLD" button
 - Case sensitive text: "PRESS AND HOLD"
2. Press and hold the button as instructed
3. Keep holding until the process completes
 - Note: Button appearance will change during the holding process
 - Loading indicators will be shown

[Screenshot – space]

Screen No: 7

Screen Name: CAPTCHA Processing Screen

Options:

- Continue holding button
- Loading indicators

Actions to be Performed:

1. Continue holding the button until processing completes
2. Wait for loading indicators to finish
3. Button appearance changes will indicate progress

Important Notes for Automation

Critical Elements for AI Agent:

- **UI Element Recognition:** Detect buttons, inputs, dropdowns, checkboxes
- **Text Input Automation:** Populate fields like username, password, name, date
- **CAPTCHA Handling:** Must simulate press-and-hold behavior
- **Navigation Flow:** Recognize and follow sequential "Next" buttons
- **Success Validation:** Identify final confirmation screen

Case Sensitivity Guidelines:

- All button texts must match exactly as specified
- Field labels must be referenced with exact casing
- Dropdown selectors require precise element identification
- Error handling should account for case-sensitive validation

Error Handling:

- If email already registered error appears, retry with different username
- Ensure all required fields are filled before clicking "Next"
- Verify CAPTCHA completion before proceeding
- Validate successful account creation before finishing

Technical Requirements:

- The AI Agent must adapt to various screen sizes and layout variations
- Maintain human-like interaction patterns throughout the process
- Handle loading states and transitions between screens
- Implement proper wait conditions for each screen to load completely
