Important Notes for Automation

Critical Elements for AI Agent:

- **UI Element Recognition:** Detect buttons, inputs, dropdowns, checkboxes

- **Text Input Automation:** Populate fields like username, password, name, date

- **CAPTCHA Handling:** Must simulate press-and-hold behavior

- **Navigation Flow:** Recognize and follow sequential "Next" buttons

- **Success Validation:** Identify final confirmation screen

Case Sensitivity Guidelines:

- All button texts must match exactly as specified

- Field labels must be referenced with exact casing

- Dropdown selectors require precise element identification

- Error handling should account for case-sensitive validation

Error Handling:

- If email already registered error appears, retry with different username

- Ensure all required fields are filled before clicking "Next"

- Verify CAPTCHA completion before proceeding

- Validate successful account creation before finishing

Technical Requirements:

- The AI Agent must adapt to various screen sizes and layout variations

- Maintain human-like interaction patterns throughout the process

- Handle loading states and transitions between screens

- Implement proper wait conditions for each screen to load completely
